

Hunter and Central Coast Regions

# Transmission Infrastructure Supplier Showcase

2026

# Foreword

In regions such as the Hunter and Central Coast, the expansion of the energy system and the shift to renewable sources present new opportunities for businesses and communities. The Net Zero Economy Authority (NZEa) supports workers, businesses, and communities in priority regions to navigate this change by providing trusted information to inform decision-making, with a long-term focus on local prosperity.

With the help of ICN, the Authority is collaborating with EnergyCo and the Department of Primary Industries and Regional Development to showcase Hunter and Central Coast businesses that can participate in the rollout and maintenance of transmission infrastructure. By sharing this showcase with major contractors across the country, we hope to support stronger links and collaboration with local businesses.

## Acknowledgement of Country

We acknowledge and pay respect to the Awabakal, Biripi, Darkinung, Geawegal, Wonnarua/Wanaruah and Worimi peoples as the Traditional Owners and custodians of the lands and waters across the Hunter and Central Coast regions. We honour their Elders, past, present and emerging.

We recognise the continuing connection of Aboriginal and Torres Strait Islander peoples to land, water, sky and community, and we are committed to supporting meaningful participation of First Nations peoples and businesses in the energy transition and the opportunities it presents.

## Introduction

The retirement of coal-fired power stations and increasing energy demand in Australia are placing pressure on the nation's electricity generation and transmission network. Nearly all remaining coal-fired power stations in the National Electricity Market (NEM) are expected to be retired and close within the next decade. To replace this capacity will require significant investment in new generation and the infrastructure to support it. In New South Wales, most new generation capacity comes from wind and solar, with batteries, hydro, and gas for grid firming.<sup>1</sup>

The NSW Government's Electricity Infrastructure Roadmap has targeted net-zero emissions by 2050, aiming to add at least 12 gigawatts (GW) of new renewable capacity and 2 GW of long-duration storage by 2030.<sup>2</sup> Achieving this will require significant investment in new transmission infrastructure, generation, and storage. At a national level, the Australian Energy Market Operator's (AEMO) Integrated System Plan outlines the transmission projects required to connect new renewable generation with the communities and industries that need it.<sup>3</sup> The Federal Government has committed \$4.7 billion under the Rewiring the Nation program to support delivery of key NSW projects, including HumeLink, VNI West, and the Central-West Orana, New England, and Hunter-Central Coast Renewable Energy Zones (REZs).<sup>3</sup> Within the Hunter, EnergyCo is delivering the Hunter Transmission Project, a new 500 kilovolt transmission line that will carry electricity from inland REZs to markets across the state.<sup>4</sup>

## The NSW Government's Electricity Infrastructure Roadmap has targeted net-zero emissions by 2050.

The NSW Government has declared five Renewable Energy Zones (REZs) across the state. A REZ is a geographic area that coordinates renewable energy generation, storage, and high-voltage network infrastructure, delivering reliable, affordable, and clean energy to NSW homes and businesses.<sup>5</sup> The Australian Government has also declared the Hunter Offshore Wind Zone in the region, with the potential to develop up to 5 GW of offshore wind capacity.<sup>6</sup> This showcase assesses supplier capability relevant to 3 REZs, the Hunter-Central Coast, Central-West Orana, and New England REZs, as well as the Hunter Offshore Wind Zone.

These findings are informed by engagement with key stakeholders, including Ausgrid, Beyond Zero Emissions, Business Hunter, Business NSW, Business NSW Central Coast, HunterNet, Hunter IF, the University of Newcastle, and others. Inputs include more than 300 survey responses, over 1,000 supplier interactions, and the expertise of the ICN network.

# Industry Capability Network

The Industry Capability Network (ICN) is an Australian not-for-profit organisation that connects local suppliers with major projects across all states and territories. ICN maintains detailed information on more than 80,000 Australian businesses and works to ensure small and medium-sized enterprises (SMEs) have full, fair and reasonable access to opportunities on major procurements and projects.

With support from the national ICN and ICN VMC databases, ICN:

- 1 Maps sector supply chains, performs market research, including insights into strategic opportunities,
- 2 Matches company capability with opportunities to create impact, leveraging its industry sector specialists,
- 3 Localises and imports replacement support on major procurements, and
- 4 Analyses, identifies, and endorses value-add opportunities.

In recent years, ICN has worked on several clean energy projects (including infrastructure, transmission, storage, generation, and services) and can assist the transition to a clean economy by activating local supply chains.

## ICN NSW and EnergyCo

ICN has partnered with the Energy Corporation of NSW (EnergyCo) to launch a dedicated Renewable Energy Zones hub on the Gateway by ICN platform. The hub provides a single point of access where local businesses can find and engage with opportunities across NSW's renewable energy zones.

**EnergyCo**

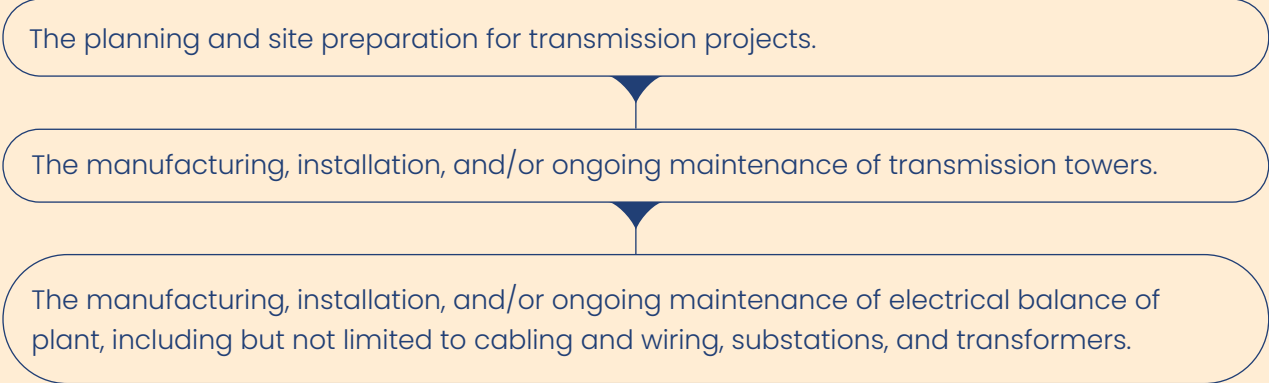

Gateway by ICN is a free online platform where businesses can register, showcase their capabilities and connect with projects across the clean energy transition and the broader infrastructure pipeline. Through this hub, buyers and suppliers can connect directly, making it easier for regional businesses to win work and grow, creating local jobs in the renewable energy sector.

By simplifying access to opportunities and improving connection pathways between local suppliers and key contractors, this portal aims to deliver lasting economic benefits to communities across NSW.

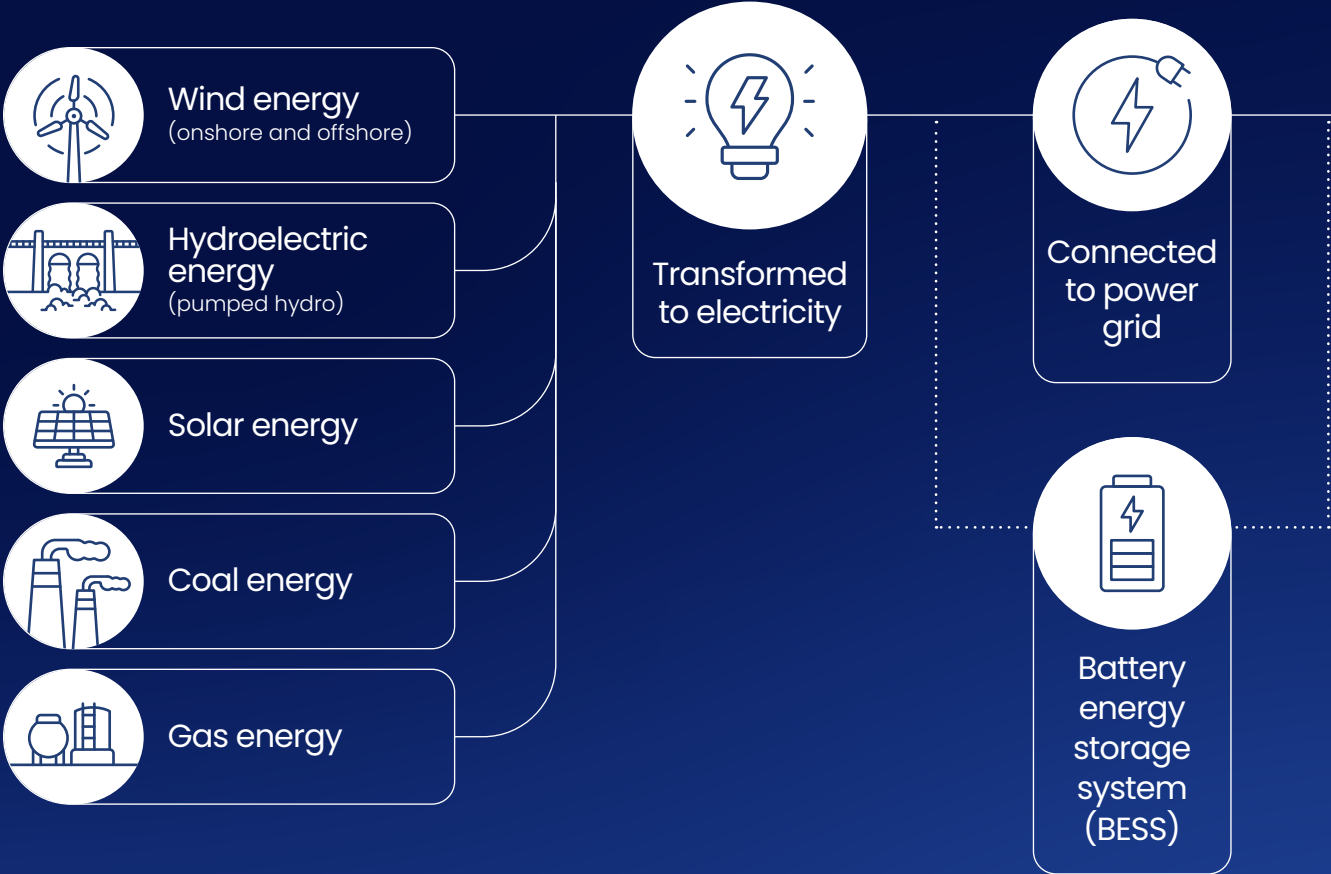

Suppliers do not need a paid ICN subscription to register, create a profile, appear on the REZ hub or submit Expressions of Interest for REZ-related work packages.

Register or find out more:  
[gateway.icn.org.au/energynsw](https://gateway.icn.org.au/energynsw)

# This project required ICN to map capability across:

## Generation

→ **Transmission** → **Distribution** →

Travels through two types of large transmission lines

1

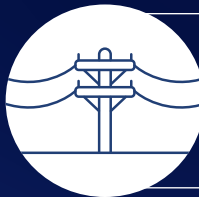

**High-voltage alternating current (HVAC)** transmission lines send electricity with a current that intermittently reverses direction and are typically used to deliver electric power to consumers.

2

**High-voltage direct current (HVDC)** transmission lines send electricity with a constant current flow in one direction and often are used for transmission of bulk power over long distances.

Stepped down at substations for local distribution

Substations feed electricity to distribution lines

Homes

Offices

Factories

# Summary of capabilities

PLANNING AND SITE PREP	HUNTER & CENTRAL COAST	NSW	AUSTRALIA
Access/Haul Road/Road Construction	SP		
Aggregate And Road Base	S		
Cable Landfall and HDD Works		SP	
Civil Works	SP		
Concrete Place and Finish	SP		
Concrete Supply	S		
Development And Consenting	SP		
Engineering And Design Services	SP		
Engineering, Procurement and Construction (EPC) Contractors			SP
Environmental Studies	SP		
Geotechnical Investigation	SP		
Heavy Machinery, Plant & Equipment Hire	SP		
Precast Concrete Products	M+S		
Site Survey	SP		
Supply Of Temporary Fencing	S		
Utility Location and Relocation		SP

Fibre Optic Cable		M+S	
Fire Suppression Systems		M+S+SP	
HV Switchgear Modules			M+S
Inverters		M+S	
LV Site Electrical Services (Construction/Installation)	SP		
Onshore Site Electrical Services (HV) (Construction/Installation)	SP		
Permanent Fencing	SP		
Power Transformers		M+S	
PV Inverters		M+S	
SCADA And Control Systems		M+S	
Security System Hardware		M+S+SP	
Site Security Services	SP		
Station Class Surge Arrestors		M+S	
Substation HV Components		M+S	
Substation O And M And Asset Management (Inspection, Monitoring, Maintenance), Monitoring, Maintenance)	SP		
Switchboard And Distribution Boards		M+S	
Switchroom Modules			M+S
Synchronous Condenser			S
Uninterruptible Power Supply (UPS)		M+S	

Capability assessment was undertaken using a hierarchical approach, with priority given to Hunter and Central Coast-based businesses. Where local capability was insufficient, NSW-based companies were considered, followed by nationally based companies where required. At the NSW and national level, companies were identified only to the extent necessary to demonstrate that sufficient domestic capability exists. The assessment is not representative of all capability.

TRANSMISSION	HUNTER & CENTRAL COAST	NSW	AUSTRALIA
Conductor And Fittings		M+S	
Crane Hire (Wet Hire)	SP		
Earthing Systems	M+S		
Hv Cables		M+S	
Line Surge Arrestors		M+S	
LV And MV Cables	M+S

Offshore LV Electrical (Construction/Installation)	SP		
Offshore Substation Installation			SP
Offshore Substation Maintenance	SP		
Offshore Substation Platform Design and Fabrication	SP		
Resource and Metocean Assessment		SP	
Seabed Preparation		SP	
Subsea Cable Maintenance			S
Subsea Cables		M+S	

#### KEY

Each work package is assigned one or more service type codes indicating the type of capability ICN identified in the market:

- M** = Manufacture - production of products or components
- S** = Supply - sourcing and distribution of materials, parts, or components
- SP** = Service Provision - delivery of installation or maintenance services to the transmission sector

Where multiple codes appear against a package, ICN identified businesses across more than one service type. This does not mean a single business delivers all types. For example, ICN identified both manufacturers and suppliers of fibre optic cable in NSW, but not necessarily businesses that do both.

# Hunter and Central Coast Regions

The Hunter and Central Coast regions are NSW's largest regional economy, made up of 11 Local Government Areas (LGAs) and a population of over 1,100,000. They serve as a vital link between Sydney and northern New South Wales.<sup>7</sup> The Hunter region hosts the Port of Newcastle, the world's largest coal export port, and has a long history of coal mining since the eighteenth century.<sup>8</sup> This foundation has supported the development of heavy industry, steelmaking in Newcastle, and large-scale power generation since the 1950s.

The regions have powered the state for decades. Major coal plants such as Eraring (2,880 MW), Bayswater (2,640 MW), and the retired Liddell (2,000W) and Vales Point (1,320W) have been among the largest generators in the NEM.<sup>9</sup> The Hunter is also home to the Tomago aluminium smelter and RAAF Base Williamstown, where Australia's F-35s are based. The industrial base supports energy, resources, defence, agriculture, and advanced manufacturing sectors. As a result, it has established strengths in mining, heavy engineering, plant operations and maintenance, aerospace and aircraft sustainment, and large-scale food and beverage manufacturing.

The CSIRO Energy Centre and National Solar Energy Centre are both located in Newcastle, putting it at the forefront of Australia's energy research. CSIRO also opened the National Energy Analysis Centre (NEAC) in 2025, further establishing the region as an important part of Australia's renewable energy transition.<sup>10</sup>

As coal mines close and energy assets retire, the Hunter and Central Coast's industrial base and skilled workforce are well positioned to support new transmission projects and regional renewable energy zones.

## Muswellbrook Shire Council

Muswellbrook has a large industrial base centred on coal mining and power generation. Home to the 2,000 MW Bayswater Power Station and formerly the 2,000 MW Liddell Power Station, both of which have shaped the local workforce and skills. As these plants retire, renewable projects being developed include bio refineries and pumped hydro.

## Singleton Council

Singleton is a mining district and the principal contributor of mining royalties in NSW. A large rail network connects mining operations and power stations to the Port of Newcastle. The industrial base includes heavy mechanical services, fabrication, and materials handling.

## Maitland City Council

Maitland is an industrial and logistics centre, supported by large estates and strong manufacturing output. Its precincts support distribution, fabrication, construction supply, and transport services.

## Cessnock City Council

Cessnock has a strong industrial heritage born from coal mining. The closure of most coal mines shifted the local economy toward new energy infrastructure, industrial development, and specialised services drawn from mining expertise.

## Lake Macquarie City Council

Lake Macquarie is an energy and manufacturing centre, anchored by large-scale electricity generation and coal mining, including Australia's largest coal-fired power station. This foundation has established strong capabilities in plant operations, mining, and advanced manufacturing.

## Legend

-  Renewable Energy Zone
-  Local Government Areas
-  Proposed Offshore Energy Zone

### Upper Hunter Shire Council

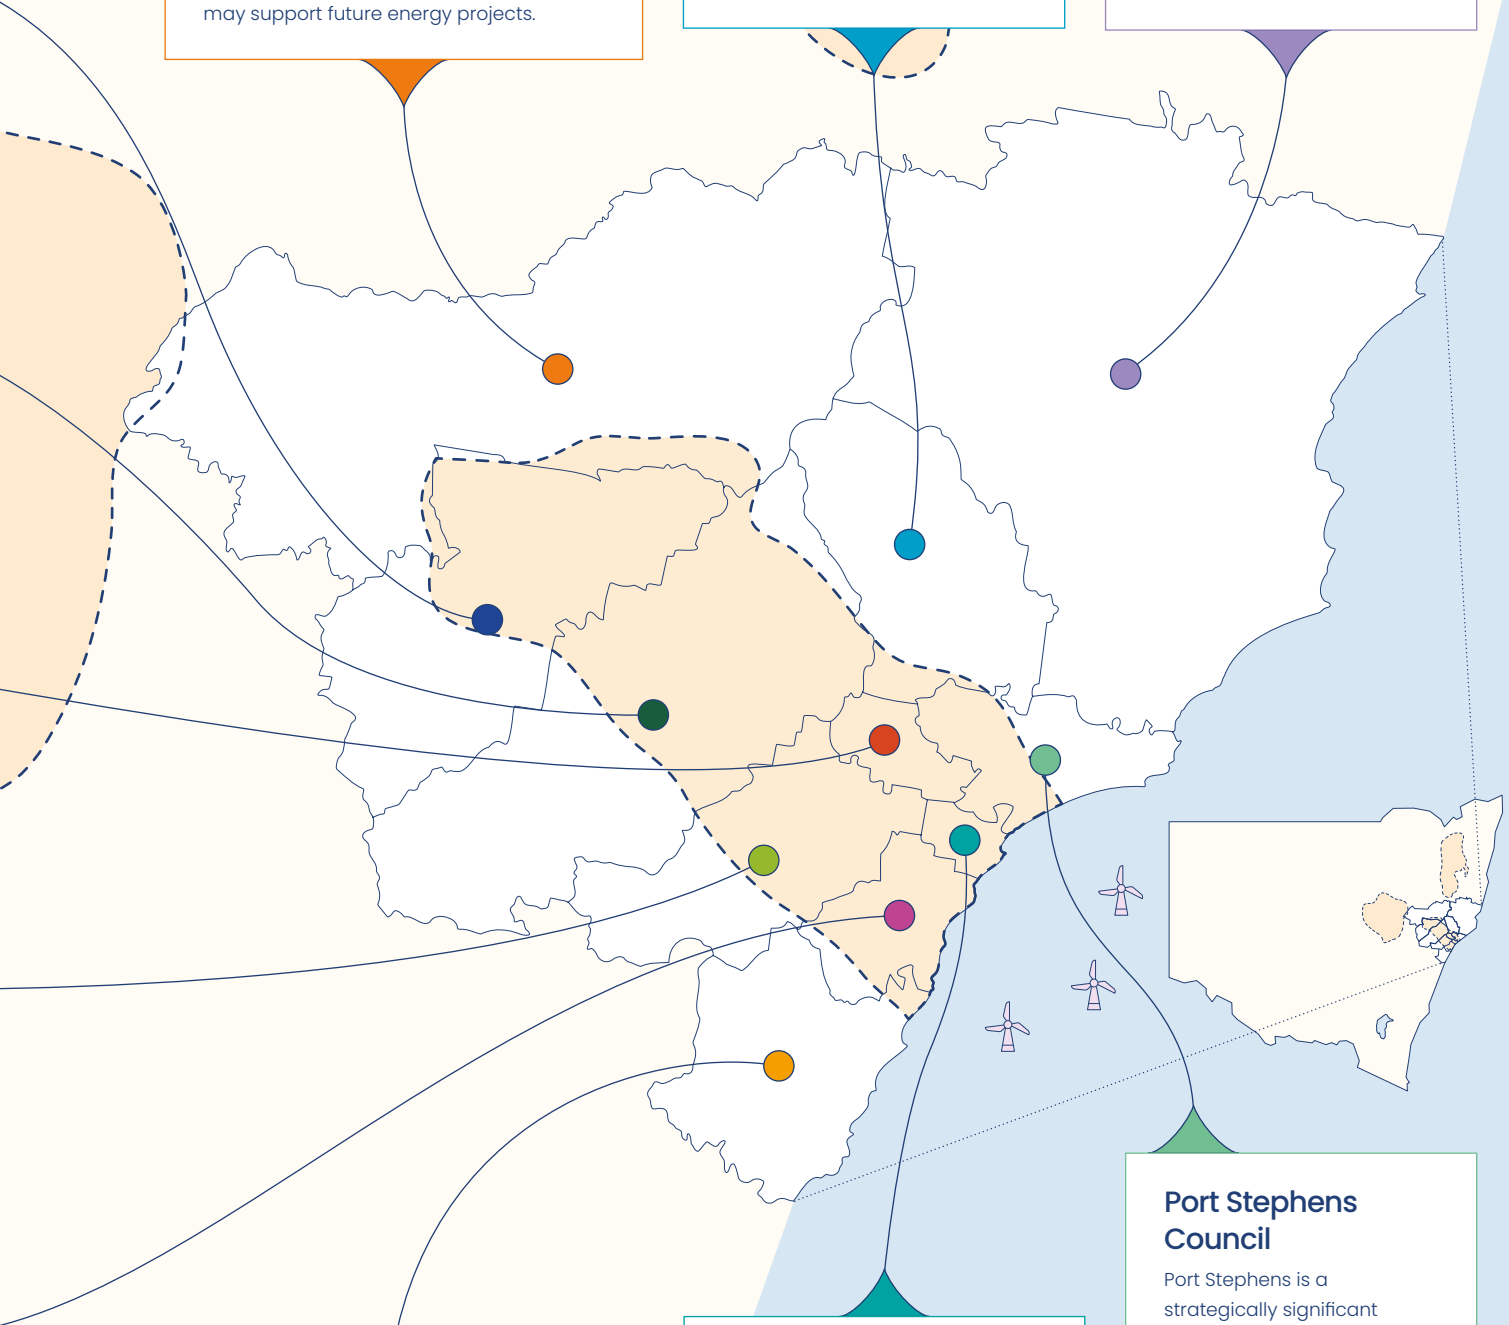

The Upper Hunter is primarily a rural region, with an economy focused on agriculture and equine industries. Although less industrialised than other Hunter LGAs, the area contains water infrastructure that may support future energy projects.

### Dungog Shire Council

Dungog is a rural region with water assets such as Chichester Dam, and its agricultural land supports primary industries.

### MidCoast Council

Mining is no longer active in the region, but the agricultural industry and access to major highways link the area with broader supply chains.

### Central Coast Council

The Central Coast is a major transport corridor, with a diverse manufacturing and logistics base, including a rail maintenance facility at Kangy Angy. It is home to one of NSW's largest gas-fired power stations and has established strengths in food manufacturing and packaging.

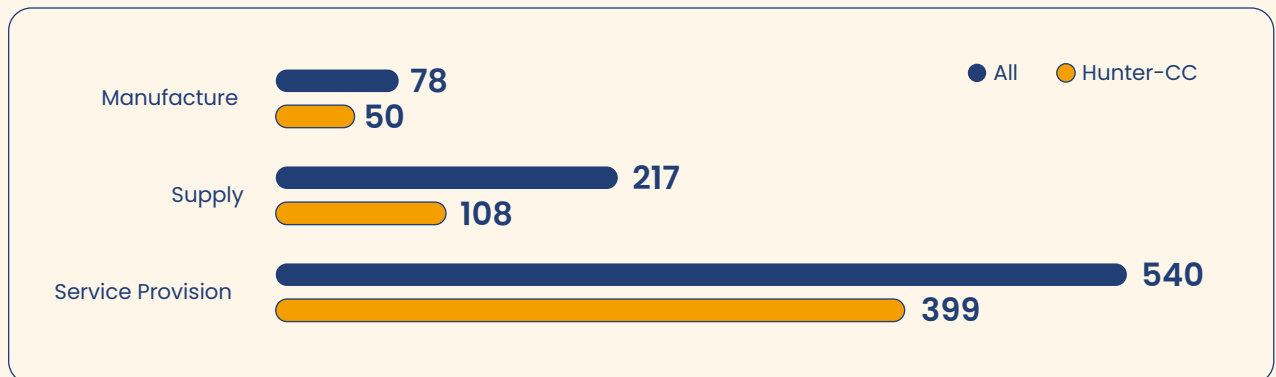

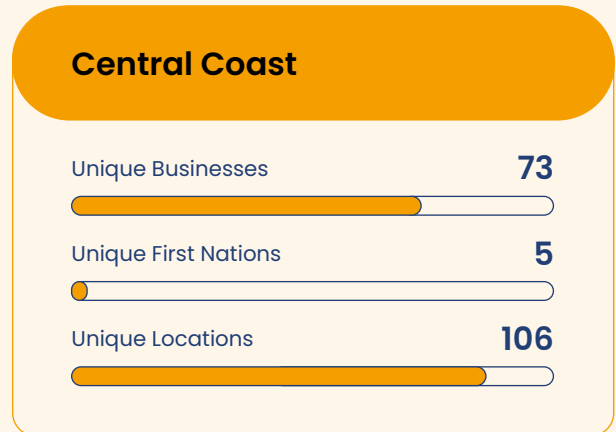

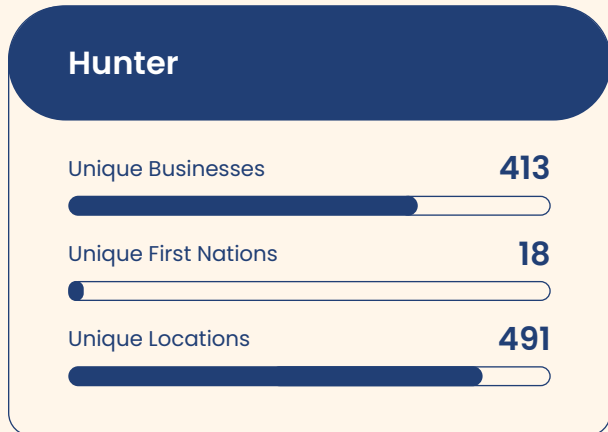

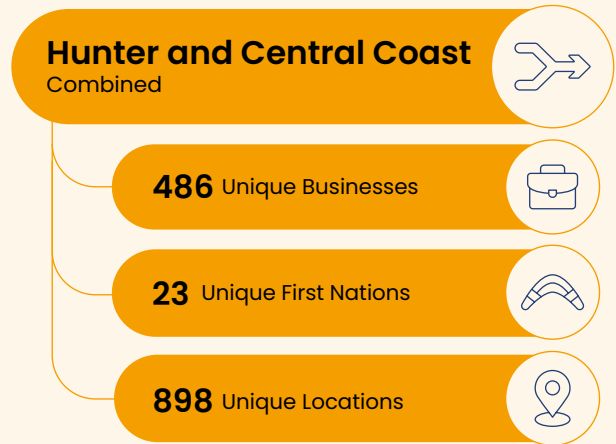

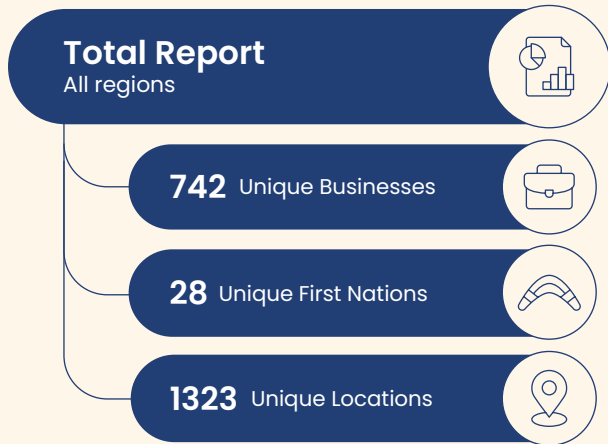

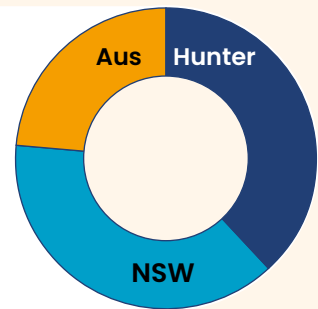

### Newcastle City Council

Newcastle is the urban capital of the Hunter. Its development has been shaped by steelmaking, shipbuilding, and coal mining and export, resulting in mature capability across manufacturing, mining services, transport infrastructure, and marine operations.

### Port Stephens Council

Port Stephens is a strategically significant industrial and defence precinct in the Hunter region. It houses RAAF Base Williamtown, Australia's only F-35 base, and the Tomago Aluminium Smelter (the largest aluminium smelter in the nation), creating a concentration of defence, aerospace, and large-scale industrial capability.

# Key Findings

This showcase is supported by ICN's broader capability assessment of the Hunter and Central Coast transmission supply chain. The assessment mapped businesses against 68 selected work packages across planning and site preparation, transmission towers, electrical balance of plant, and offshore related scopes. The results show a strong and diverse regional supply chain. ICN identified 486 businesses across the Hunter and Central Coast, including 413 in the Hunter and 73 in the Central Coast.

These numbers should be read in context. The project did not map every business that could contribute to the broader energy transition or the full transmission sector. It mapped businesses against a defined set of work packages that project owners, and EPC contractors would reasonably procure from the market. As a result, some adjacent capability may not be fully reflected in the data.

Service provision was the strongest area of identified capability, reflecting the regions' established strengths in civil works, construction, engineering, electrical services, mining services, heavy industry, and industrial maintenance.

Manufacturing capability was lower by count, with 50 Hunter and Central Coast manufacturers identified across the assessed packages. Much of that base is currently oriented toward mining, defence, energy, and rail rather than transmission-specific products, which is reflected in the numbers.

However, this does not mean the regions lack manufacturing capability. The Hunter and Central Coast have a broader industrial base in heavy fabrication, machining, and metal processing

that was not fully captured in the package-based mapping. For this reason, ICN considers the regions more capable than the headline figures suggest, and the transferable capability assessment explored where that potential is most credible.

The transferable capability assessment tested where existing regional strengths could realistically support future transmission demand. ICN considered what the supply chain needs, what the Hunter and Central Coast are already good at, where the gaps are, and whether there is a credible commercial opportunity for local businesses to enter or expand.

The assessment focused on component groups with the greatest alignment to regional capability, including lattice towers, line hardware and conductor fittings, busbars, anchor cages, and switchroom enclosures. Of these, towers, line hardware, and busbars presented the strongest commercial case. The manufacturing requirements for each align closely with what Hunter and Central Coast businesses already do.

# First Nations Owned Businesses

## First Nations Owned Businesses

The Hunter and Central Coast regions are the traditional lands of several Aboriginal nations, primarily the Awabakal, Darkinung, Geawegal, Wonnarua/Wanaruah and Worimi peoples.<sup>11</sup> The region is home to over 50,000 First Nations people.<sup>12</sup>

The Hunter has a proud history of First Nations-owned business growth and supply chain development. The Mandurah Hunter Indigenous Business Chamber was Australia's first representative body and advocate for First Nations-owned businesses, and led to the establishment of the NSW Indigenous Chamber of Commerce (NSWICC) in 2009.<sup>13</sup> As the peak body for First Nations-owned business in NSW, the NSWICC works with entrepreneurs, business owners and communities to build capacity, remove barriers and connect businesses with procurement opportunities.<sup>14</sup>

The energy transition presents a significant opportunity for First Nations businesses to participate. The NSW Renewable Energy Sector Board's Plan sets a minimum participation rate of 1.5% of contract value for First Nations people across REZ projects.<sup>15</sup> ICN works alongside Supply Nation and State and Territory Indigenous Business Chambers to continue the growth of First Nations industry in the region and across the nation.

Supplier	BLACKROCK INDUSTRIES
Location	12 Enterprise Crescent, Muswellbrook, NSW 2333
Contact	Michael Kriesch   +61 4 0711 0496   michael@blackrockindustries.com.au
Website	blackrockindustries.com.au
Service Type	Service Provision
Categories	<ul style="list-style-type: none"> <li>• Supply Fencing</li> <li>• Permanent Fencing</li> <li>• Machinery Hire</li> <li>• Civil Works</li> </ul>
Contract Capacity	Up to \$5 million
Overview	<p>Blackrock Industries is a proud Indigenous-owned mining and civil services provider, with 10 years of operating experience. The company delivers a broad range of services to mining, civil, and infrastructure projects across the Hunter region, supporting clients from project commencement through to delivery.</p> <p>Their range of operations include earthworks, heavy plant and equipment hire, civil consultancy support, mine site services, and environmental and rehabilitation works.</p> <ul style="list-style-type: none"> <li>• Bulk earthworks and site preparation</li> <li>• Mining environmental services</li> <li>• Mine site support services</li> </ul>
Key clients	BHP Group, Powerlink, Downer

Supplier	CUSTOM TRANSPORTABLE BUILDINGS
Location	64 Greenleaf Road, Kooragang NSW 2304
Contact	Simon Griffiths   +61 407 648 992   simon.griffiths@ctb.net.au
Website	ctb.net.au
Service Type	Manufacture, Service Provision
Categories	<ul style="list-style-type: none"> <li>• Switch room modules</li> <li>• Onshore site electrical services</li> <li>• Security system hardware</li> <li>• Substation O&amp;M and asset management</li> <li>• Switchboard &amp; distribution boards</li> <li>• Fire suppression systems</li> </ul>
Contract Capacity	\$20 million+
Overview	<p>Established in 1995, Custom Transportable Buildings specialises in the design, manufacture, fit out, commissioning, delivery and installation of electrical switch rooms, substations and control rooms. Their project management, design, engineering, manufacturing and logistical skills are utilised across the industrial, electrical, marine and infrastructure sectors.</p> <ul style="list-style-type: none"> <li>• Electrical switch rooms</li> <li>• Electrical substations</li> <li>• Data centres</li> <li>• Pump rooms</li> </ul>
Key clients	AGL Energy, Bechtel Australia, Downer EDI, GE Grid, Orica, Santos, Siemens
Relevant Experience	Design and manufacture 22kV electrical switch rooms and substations for GE Grid, ABB Australia and J.A Martin.

<b>Supplier</b>	<b>DOWN TO BUSINESS EXCAVATIONS</b>	
<b>Location</b>	3 Cottesloe Road, Jiliby, NSW, 2259	
<b>Contact</b>	Rebecca Thompson   +61 438 603 733   admin@dtbexcavations.com.au

# Central Coast Council

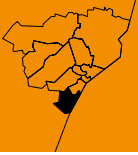

## Central Coast Council

Halfway between Sydney and Newcastle, the Central Coast is a major transport corridor in NSW. It is home to household names in food manufacturing such as Mars Food, Sanitarium, and Sara Lee, supported by an extensive network of logistics, warehousing, freight, and distribution providers. It is also a medical technology and health hub, with a broad range of allied health companies, national industry associations, and health and manufacturing businesses.<sup>16</sup> The Central Coast has a population of 355,000, which is projected to grow to more than 404,000 by 2041, and generates an annual economic output of \$49 billion, of which construction and manufacturing are the largest contributors at \$8.9 billion and \$8.2 billion, respectively.<sup>17</sup> Key assets and infrastructure underpinning this capability include:

- Located on the M1 Pacific Motorway and Main Northern Railway freight corridor
- Major logistics, warehousing, and distribution hubs at Tuggerah, West Gosford, and Somersby
- Mariyung Maintenance Facility at Kangy Angy, a \$300 million purpose-built intercity rail fleet maintenance facility operated by UGL Rail<sup>18</sup>
- Colongra Gas Power Station (667 MW), one of the largest gas-fired power station in New South Wales<sup>19</sup>
- Waratah Super Battery (850 MW / 1,680 MWh), located on the site of the former Munmorah coal-fired power station, declared Critical State Significant Infrastructure<sup>20</sup>
- State-of-the-art medical facilities and the Central Coast Medical Research Institute.

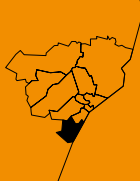

<b>Supplier</b>	<b>ANCHORING ROPE AND RIGGING</b>
<b>Location</b>	17 Elwins Road, Somersby NSW 2250

# Cessnock

## Cessnock

Cessnock has a long history of coal mining, manufacturing, construction, agriculture, viticulture, and related tourism activities. Kurri Kurri is the industrial hub in the area and home to the LGA's largest concentration of occupied industrial land.<sup>21</sup> Cessnock is home to 69,000 people, supports 18,000 jobs and has an annual economic output of \$7.9 billion.<sup>22</sup> Manufacturing, construction, and mining are the largest outputs at 20%, 13%, and 12% respectively, totalling \$3.4 billion.<sup>22</sup> The area is a recognised centre for manufacturing in the Hunter Region, with output including industrial and metal-based products alongside a growing food and beverage sector linked to the Hunter Valley, Australia's oldest surviving commercial wine region.<sup>23</sup> Key assets and recent developments shaping Cessnock's industrial transition include:

- Recent closure of coal mines (e.g. Aberdare, Ellalong, Astar)
- Hunter Power Project at Kurri Kurri: new 660 MW gas-fired power station on the former aluminium smelter site
- Cluster of mining services companies, including Orica Explosives
- Direct access to the Hunter Expressway, connecting to the M1 Motorway and Newcastle
- Significant food and beverage manufacturing capability linked to the Hunter Valley wine region.

# Dungog Shire Council

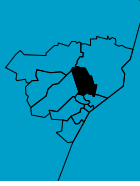

## Dungog Shire Council

Dungog Shire is located in the Upper Hunter Region, approximately 75 kilometres north of Newcastle. The Shire covers 2,248 square kilometres of predominantly rugged, hilly country adjacent to the Barrington Tops, a World Heritage-listed area within the Central Eastern Rainforest Reserves of Australia.<sup>24</sup> The Williams and Paterson Rivers are both tributaries of the Hunter River and contribute over 40% of its total flow.<sup>25</sup> Dungog is an important water catchment area for the broader Hunter, with the Chichester Dam supplying drinking water to the lower Hunter region.<sup>26</sup>

Dungog is home to approximately 9,905 people and has an annual economic output of \$1.1 billion.<sup>27</sup> Agriculture, Forestry and Fishing is the largest sector by both employment (462 jobs) and output (\$245.3 million), followed by Construction (\$214.3 million).<sup>27</sup> The Shire's economy has historically centred on timber and dairying, today it supports beef and dairy cattle, poultry, olives, and an emerging tourism sector.<sup>28</sup> Key assets and infrastructure within the Shire include:

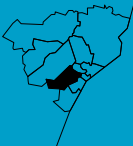

- Chichester Dam and Lostock Dams
- Rail connection to Newcastle and Sydney (Dungog station on the Hunter Line)
- Martins Creek Quarry, a basalt quarry supplying aggregate
- Barrington Tops National Park (World Heritage listed)

# Lake Macquarie City Council

## Lake Macquarie City Council

Lake Macquarie's industry has largely revolved around coal mining and the associated power generation. It has a population of 222,000 and an economic output of \$34 billion.<sup>29</sup> Construction, mining, and manufacturing contribute 48% of this output, with \$6 billion, \$5 billion, and \$4 billion respectively.<sup>29</sup> As major energy assets near retirement, the region's industrial focus is evolving toward advanced manufacturing and the remediation of legacy mines to support the emerging clean technology sector. Lake Macquarie's industrial base includes the following key assets and infrastructure:

- Major energy hub
- Eraring Power Station (2,880 MW), the largest in Australia
- Vales Point Power Station (1,320 MW)
- Active coal mining operations supplying generators
- Cardiff Advanced Manufacturing Precinct, generating over \$1 billion in annual output
- Strong local capability in plant maintenance and engineering services
- Established mining services and environmental remediation capability to support asset closure and energy transition.

# Maitland City Council

## Maitland City Council

Maitland is an industrial and logistics centre at the geographic heart of the Hunter, connecting the upper Hunter's mining and energy operations to the Port of Newcastle. The Maitland economy generates an estimated \$16.2 billion and supports an estimated 35,000 jobs, representing 11% of the Hunter's working population.<sup>30</sup> Behind healthcare and social assistance and retail, construction is the largest employer with 11% of Maitland's workforce.<sup>30</sup> Regional exports total \$5.8 billion, of which mining accounts for 37%, closely followed by manufacturing at 23%.<sup>30</sup>

At over 140 hectares, the Rutherford industrial precinct is one of the Hunter's largest industrial estates and is home to a concentration of fabricators, engineering firms, distributors, and construction suppliers.<sup>31</sup> Alongside the Thornton and Anambah business parks, these precincts give Maitland a strong base in heavy fabrication, mechanical services, and supply chain logistics servicing both the mining sector and emerging infrastructure projects. Maitland's key precincts and infrastructure include:

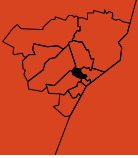

- Rutherford industrial precinct, over 140 hectares of fabrication, engineering, and distribution capability
- Thornton and Anambah business parks supporting construction supply and mining services
- Direct access to the Hunter Expressway and New England Highway
- One of the fastest-growing populations in the Hunter, with growth exceeding 2%
- Significant residential and commercial construction activity.

# Downer

Downer is the leading provider of integrated services in Australia and New Zealand. Downer's teams focus on delivering Transport & Infrastructure, Utilities, Social Infrastructure & Citizen Services, Rail & Transit Systems and Industrial & Energy services.

#### Categories:

- Engineering, Procurement and Construction (EPC) Contractors
- Onshore Site Electrical Services (HV) (Construction/Installation)
- Switchboard and Distribution Boards
- Security System Hardware
- Switchroom Modules
- Utility Location and Relocation
- Transmission Tower Maintenance
- Concrete Place and Finish
- Engineering and Design Services
- Fire Suppression Systems
- LV Site Electrical Services (Construction/Installation)

Downer has been part of Australia's industrial and infrastructure landscape for over 160 years, including nearly 100 years of continuous contribution to the Hunter Region. Downer's work in the Hunter reflects their long-standing commitment to building strong regional economies, supporting sovereign capability, and enabling local communities to thrive.

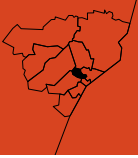

Today, Downer employs more than 350 people across the Hunter, including 22 apprentices and a diverse, highly skilled workforce that supports passenger transport, freight, defence, heavy industry, power generation, utilities, and telecommunications across the country.

#### Downer's regional footprint includes:

- Hexham Manufacturing Facility, part of the local industry for more than 40 years, home to 100 employees delivering end-to-end electrical manufacturing solutions. From this base Downer provides mechanical and electrical shutdowns, turnarounds and outage services to major industrial and power generation clients across the region – including the Port of Newcastle, Bayswater Power Station and Newcastle Coal Infrastructure Group.
- Downer's Teralba asphalt plant, a team of 35 supplying vital materials for local roads and infrastructure.
- The Technical Operations Centre in Hexham, where Downer's teams work to monitor and restore utilities services across Australia.

Beyond delivering major projects and essential utilities services, Downer is committed to ensuring the region retains critical trade, technical and professional skills through employment pathways, capability development and local procurement.

As the Hunter looks to a future shaped by clean energy, advanced manufacturing and digital infrastructure, Downer remains deeply invested, partnering with industry and supporting the region's transition while continuing to deliver for the communities Downer has proudly been part of for nearly a century.

# MidCoast Council

## MidCoast Council

MidCoast Council was formed in 2016 through the merger of the former Gloucester Shire, Great Lakes, and Greater Taree councils. MidCoast is the largest council area in the Hunter region by land area, covering 10,053 square kilometres, 30% of the Hunter region and includes towns such as Taree, Forster, Gloucester, Tuncurry, and Wingham.<sup>32</sup>

MidCoast has a population of approximately 98,000 people, supports 31,304 jobs and has an annual economic output of \$11.8 billion.<sup>33</sup> Health Care and Social Assistance is the largest employer (6,703 jobs), reflecting the role of Manning Base Hospital and the aged care sector, followed by Retail Trade (3,844 jobs), Accommodation and Food Services (3,093 jobs), and Construction (3,057 jobs).<sup>33</sup> The top three outputs of the MidCoast region are construction, rental, hiring and real estate, and manufacturing, with \$2.0B, \$1.4B, and \$1.3B, respectively.<sup>33</sup>

While coal mining is no longer active in the region, Gloucester's former mining heritage and the area's proximity to the Pacific Highway and links between the Hunter and New England regions provide connectivity to broader supply chains. Infrastructure and economic assets within the LGA include:

- Pacific Highway, North Coast Railway, Taree Regional Airport
- Manning Base Hospital, a regional health services hub
- Large tracts of industrial land in Taree supporting manufacturing and logistics
- Gloucester, a former mining town with transport links to the Hunter and New England regions
- \$310 million in development applications assessed by Council in the 2024–25 financial year.<sup>34</sup>

# Muswellbrook Shire Council

## Muswellbrook Shire Council

Muswellbrook Shire is centrally located in the Upper Hunter, approximately 130 kilometres north-west of Newcastle. Industry in Muswellbrook includes agriculture, viticulture, equine, power generation, and coal mining. The Shire is the main centre for NSW's power generation capacity and has the largest concentration of open-cut mining operations in the upper Hunter, with the second-highest rate of coal extraction in the state behind Singleton.<sup>35</sup> Its population of 16,000 supports 11,000 jobs and generates an annual economic output of \$15.3 billion.<sup>35</sup>

As major energy assets approach retirement and mining operations close, Muswellbrook is transitioning toward clean energy infrastructure and diversifying their industry capability. The former Muswellbrook Coal Mine, which ceased operations in 2022 after 115 years, is being repurposed as the Muswellbrook Clean Industries Precinct (MCIP), incorporating pumped hydro, solar, and continuing investigations into green hydrogen, energy storage technologies, and co-located clean industry.<sup>36</sup> Significant energy assets and transition projects in the Shire include:

- Bayswater Power Station (2,640 MW), one of NSW's largest generators
- Liddell Power Station (2,000 MW), decommissioned in 2023
- Muswellbrook Solar Farm (135 MW) and battery energy storage system (135 MW), approved May 2025, developed by OX2 and Idemitsu on the former Muswellbrook Coal Mine site<sup>37</sup>
- Muswellbrook Pumped Hydro project, declared Critical State Significant Infrastructure by the NSW Government in 2024, jointly developed by AGL and Idemitsu<sup>38</sup>
- AGL's Hunter Energy Hub, repurposing the former Liddell and Bayswater sites for battery storage, advanced manufacturing, and materials recovery.<sup>39</sup>

<b>Contract Capacity</b>	\$10 Million
<b>Overview</b>	<p>Tutt Bryant is an Australian heavy lift and specialised logistics provider, supporting major projects with crane hire and heavy plant and equipment hire. With more than 16 years of operating experience, Tutt Bryant delivers complex lifting, haulage, and relocation solutions across construction, mining, Oil &amp; Gas, energy, renewables, and marine sectors. The company operates one of Australia’s largest crane fleets and is equipped to manage challenging project environments, including large-scale asset movements and high-risk lifts.</p> <ul style="list-style-type: none"> <li>• Heavy Haulage</li> <li>• Shut Down Equipment</li> <li>• Cranage (Wet and Dry hire)</li> <li>• Rigging services</li> </ul>
<b>Relevant Experience</b>	<ul style="list-style-type: none"> <li>• Crane supply for INPEX for all maintenance and shutdowns (2025)</li> <li>• Specialised lifting and transport, including the delivery and installation of the evolution locomotive at 7-8 mile using the 1100 gantry system for Rio Tinto (2024)</li> </ul>

Robson Civil Projects has been proudly building the infrastructure of tomorrow since 1950, delivering civil construction services to private and public clients across the renewable energy, transport, housing, resources and industrial/commercial sectors.

With a strong presence across Sydney, the Central Coast, Newcastle, the Hunter Valley and the Central West, Robson has earned a reputation as a dependable contractor with the capability, expertise and resources to deliver complex civil projects across Greater NSW.

**Categories:**

- Access/Haul Road/Road Construction
- Aggregate and Road Base
- Civil Works
- Concrete Place and Finish
- Heavy Machinery, Plant & Equipment Hire
- Utility Location and Relocation

Robson has extensive experience delivering largescale solar farm Civil Works—including foundation construction, inverter pads, and longform access roads and intersections for new developments. We also maintain longstanding partnerships in the Battery Energy Storage System (BESS) sector, delivering greenfield BESS infrastructure that strengthens grid stability and enhances energy storage capacity.

With a specialised fleet of placement tools, Robson can construct substantial pavement areas and provide civil foundation works for new substation facilities.

**Previous experience**

**ACEN Renewables – Gulgong Solar Farm Access Road**

Robson delivered a 1.6 km access road for ACEN Renewables to support the development of a new solar farm at Gulgong. Works included bulk earthworks, drainage blankets through wet areas, installation of multicell underroad culverts, as well as signage, fencing and landscaping.

**Origin Energy – Eraring Battery Energy Storage System**

Robson partnered with Enerven to deliver Civil Works for Origin’s Eraring BESS project. The scope covered bulk earthworks, stormwater and drainage systems, pavements and kerbing for a greenfield 700 MW / 2,800 MWh grid-connected BESS delivered across two stages.

# Newcastle City Council

## Newcastle City Council

Newcastle is the urban capital of the Hunter and serves as an industrial and logistics hub for the region. It is celebrated for its industrial heritage and is known for being home to major industries spanning brickworks, collieries, foundries, gasworks, smelters, steelworks, and incinerators.<sup>40</sup> Its industrial past has developed deep capabilities across manufacturing, mining services, rail, port operations, and engineering, and in recent years the city has undergone significant transformations into a smart and sustainable city.<sup>41</sup> Its population of 179,000 people supports 116,000 jobs and an annual economic output of \$51.6 billion, of which manufacturing makes up 15.8% (\$8.1 billion).<sup>42</sup>

Newcastle is also home to the CSIRO Energy Centre and National Solar Energy Centre, which is focused on concentrated solar power and is the only facility of its kind in Australia.<sup>43</sup> The University of Newcastle is one of Australia's leading research universities, with over 37,000 students and established strengths in engineering, energy systems, and environmental science, and is a major source of the region's skilled engineering and technical workforce.<sup>44</sup> This capability is further supported by the following key assets:

- Port of Newcastle, with deepwater terminals at Kooragang Island and Carrington handling coal, bulk grain, fuel and general cargo
- Newcastle Logistics Precinct at the Port of Newcastle providing additional portside storage in support of renewable energy developments
- Major chemicals manufacturing at Orica's Kooragang Island ammonia facility
- Extensive legacy rail and industrial infrastructure linked to the former BHP steelworks
- Strong local capability in heavy engineering, fabrication, and mechanical and electrical service.

Supplier	ADVITECH
Location	7 Riverside Drive, Mayfield West NSW 2304
Contact	Paul Reynolds   +61 2 4924 5400   paul.reynolds@advitech.com.au

Location	8/56 Industrial Drive, Mayfield East NSW 2304
Contact	Todd Marshall   +61 2 4968 7999   toddm@avetechnologies.com.au
Website	avetechnologies.com.au
Service Type	Service Provision
Categories	Security System Hardware
Overview	<p>Founded in 2001, AVE Technologies has grown into one of the largest multi-faceted electrotechnology solution providers in NSW, servicing clients on national and international projects. AVE's expertise covers a wide range of technologies, enabling them to manage projects of all sizes for a range of industries including Government, Mining, Commercial and Construction.</p> <ul style="list-style-type: none"> <li>• Security &amp; access control</li> <li>• Process control &amp; automation</li> <li>• Data centre installations</li> <li>• Audiovisual solutions</li> </ul>
Key clients	Inner Range, Panduit International

A.T.B. Morton Group is a proudly family-owned and operated Australian construction and industrial services business. Founded in 1981, the group has grown considerably since its establishment in Newcastle in 1981, completing over 2,000 projects worth more than \$1 billion across New South Wales and Queensland.

A.T.B. Mortons' focus on delivering efficient and cost-effective projects to clients and its strategic move towards vertical integration has led to the development of complementary divisions within the Morton Group. This direction enabled the group's growth and broadened its capabilities across construction, management, materials and products, civil precast, structural steel fabrication and protective coating services.

A.T.B. Morton Group offers complete project control through end-to-end delivery of major projects across Government, commercial, industrial, and education sectors throughout New South Wales and Queensland.

Core capabilities include Design and Construction, project management with HSE, Civil Works, manufacturing and installation of precast products, structural steel fabrication and protective coatings, as well as concrete supply and production. These essential components are delivered through the supporting entities Advanciv, Armorgalv, CIA Precast & Steel, Hunter Galvanising, Redi Crete and Redisand.

#### Categories:

- Civil Works
- Concrete Place and Finish
- Concrete Supply
- Precast Concrete Products
- Steel Galvanising and Coating Services
- Transmission Tower Foundations

#### Project examples:

##### Fulham Solar Farm (2025)

Delivered corrosion protection services supporting renewable energy and associated electrical infrastructure for Precision Oxycut.

- Galvanising of steel components used in solar array and supporting electrical structures

##### Liddell BESS (2025)

Supplied precast electrical infrastructure to support grid-connected battery energy storage works for Australian Construction Group.

- Project value: \$150,000
- Manufacture and supply of precast electrical pits for electrical and transmission-related services

##### Completed Project – SEW Eurodrive NSW Regional Facility

Successfully delivered the SEW Eurodrive NSW Regional Facility, a \$6.1 million purpose-built industrial servicing facility with a total building area of 2,486 sqm.

- Land and Build delivery model.
- Full Design and Construct services
- Custom industrial workshop and office facility
- Heavy-lift crane and specialised operational zones

# PBE

INNOVATING SAFETY.  
POWERING PRODUCTIVITY.

Established in 1979, PBE Rutherford is an Australian electrical engineering services specialist and part of the PBE Group. The company delivers a fully integrated portfolio of electrical, mechanical, and site-based services, employing approximately 200 personnel and supporting critical infrastructure and industrial operations across Australia.

PBE Rutherford services the mining, energy, infrastructure, data centres, and heavy industry sectors, delivering globally proven technologies supported by local expertise to improve safety, productivity, and operational reliability. The business combines engineering, on-site support, and systems integration, with experience supporting electrification and energy management outcomes aligned to decarbonisation objectives.

PBE Rutherford provides services across the asset lifecycle, including the supply and repair of industrial cables and couplers, manufacturing, equipment overhauls and refurbishment, and flexible equipment hire to support shutdowns and variable project demands. The company also delivers microgrid and electrical infrastructure projects, covering the design, supply, installation, and commissioning of site power systems, including substations, switchrooms, power stations, solar, BESS, and distributed energy solutions. These capabilities are supported by on-site electrical services such as inspections, maintenance, operations support, shutdown assistance, and technical response.

#### Categories

- Inverters
- PV inverters
- Fibre optic cable
- Power transformers
- Substation HV components
- SCADA and control systems
- Station class surge arrestors
- Onshore site electrical services

PBE Rutherford has supported key major projects including the construction and commissioning of the Liddell 330/33kV Substation for AGL, and the delivery of the Ironbark 132/11kV Substation for Fitzroy Australia Resources, including project management, construction and commissioning. The Liddell transmission substation project included switchroom manufacturing, relocation of 33kV overhead powerlines, installation and testing of earthing systems, substation construction, project management, and installation and testing of 330kV and 33kV cables.

# Port Stephens Council

## Port Stephens Council

Port Stephens is home to RAAF Base Williamtown, Australia's only F-35 base, and the Tomago Aluminium Smelter, Australia's largest. The region has a population of approximately 79,000 and supports around 31,000 jobs. Its economic output is valued at \$19.3 billion, with manufacturing the largest contributor at \$6.6 billion, representing 34% of total output.<sup>45</sup> Port Stephens is home to internationally recognised and highly specialised manufacturing businesses, mainly concentrated in Tomago, Williamtown and Heatherbrae. Location and access to transport infrastructure create a competitive advantage, with connections to national markets via the M1 Pacific Motorway, the Pacific Highway corridor, and the New England Highway.<sup>46</sup> Key assets across the region include:

- RAAF Base Williamtown and Newcastle Airport operate as a dual military and civilian aviation hub, with over 1.2 million passengers per year
- Astra Aerolab, a 76-hectare aerospace and defence precinct located beside RAAF Base Williamtown, with tenants including Kongsberg and Lockheed Martin
- Robust manufacturing sector at Tomago, with internationally recognised businesses
- Prime industrial land with direct access to the Port of Newcastle, M1 Motorway, and Newcastle Airport.

Founded in 1968 and headquartered in Newcastle, Ampcontrol is Australia's largest privately owned electrical engineering company, with operations across Australia. The company designs, manufactures, installs, and maintains electrical solutions and power infrastructure that support the resources, energy generation, utilities, and infrastructure sectors.

With Australian-based manufacturing facilities and a national field service network, Ampcontrol delivers end-to-end capability across high-voltage power systems. This includes engineered solutions for substations, switchyards, transformers, switchgear and modular power rooms, supported by installation, testing, commissioning and lifecycle maintenance services.

Ampcontrol supports transmission programs, REZ developments and offshore wind enabling works from early-stage technical input, compliance and connection requirements through to construction support, high-voltage testing, commissioning and maintenance. Their team provides engineering documentation, safety management planning and compliance support to ensure network and connection works meet regulatory and operational requirements.

High-voltage services extend to installation, upgrades, repairs and maintenance across substations, transformers and cable networks. Ampcontrol also undertakes transformer overhauls and condition assessments, supported by a NATA-accredited oil testing laboratory, and provides cable inspection, testing, fault finding, terminations and workshop-based repair support.

Ampcontrol also designs and manufactures power electronics, protection systems and engineered control and monitoring solutions. Additional capability includes charging and electromotion infrastructure for industrial, port and marine environments, including fast-charging

systems and integration with supporting power infrastructure.

With contract capacity exceeding \$50 million, Ampcontrol provides integrated engineering, manufacturing and field service capability to support Australia's renewable transmission and electrification projects.

Nepean Power has operated in Australia for the past 30 years and is a market leading provider of the design, manufacture, supply and service of electrical power systems and solutions to support the future of industry.

The company provides innovative and sustainable solutions across a range of industries and employs over 200 people across various projects, with deep capability supporting the mining, energy, and renewables sectors, including conveyor systems optimisation. Nepean Power has supported clients including Western Sydney Airport, Rio Tinto, Glencore, Yancoal, ABB, Schneider Electric, and Allen-Bradley.

Nepean Power delivers end-to-end energy solutions across design, manufacturing, supply, and service. The company has design capability for both above-ground and underground power systems, providing low to high voltage solutions from 240V to 140kV.

Nepean Power offers a wide range of engineered electrical and electronic systems, custom designed for both public and private sector applications. The company operates state-of-the-art high voltage, high-capacity testing bays to ensure equipment meets client requirements and is prepared for safe integration on site.

Sustainability is a core focus of Nepean Power's operations. The company continually reviews its systems and processes to identify opportunities to reduce environmental impact without compromising service or quality, with a commitment to pollution prevention, water

and energy conservation, stewardship, waste reduction, and recyclability.

Experience and capability:

- HV Cables
- PV Inverters
- Station Class Surge Arrestors
- Earthing Systems
- Power Transformers
- Line Surge Arrestors
- Switch room Modules
- Substation HV components
- MV Distribution Transformers
- Switchboard and Distribution Boards

Nepean Power was selected to design, manufacture and install three prefabricated 22kV switchgear and control buildings for Western Sydney International Airport. The company delivered an end-to-end solution from design and engineering through to manufacturing, transportation, and final installation.

# Singleton

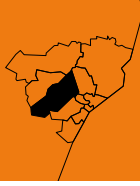

## Singleton

Singleton is a significant contributor to the Hunter economy, supporting 18,000 jobs and generating \$25.4 billion in output. As the largest contributor to mining royalties in NSW, mining accounts for 78% (\$19.8 billion) of total output and is the largest employer, accounting for 37% of the workforce.<sup>47</sup> Singleton connects the Upper Hunter's mining operations and power stations to the Port of Newcastle via a major rail freight network.<sup>48</sup> Singleton is also home to Lone Pine Barracks, one of the Australian Army's major training bases.<sup>49</sup>

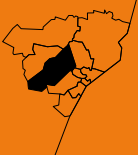

Singleton's existing workforce has decades of experience in manufacturing, engineering, and trade. The NZEA has identified strong potential for these skills to transition into emerging sectors, including component manufacturing, solar panel assembly, battery production, grid infrastructure maintenance, advanced materials processing, circular economy activities, and food manufacturing and the agriculture supply chain.<sup>50</sup> Singleton's key assets and projects include:

- Largest contributor of mining royalties in NSW
- Major rail freight network connecting mining operations and power stations to the Port of Newcastle
- Lone Pine Barracks, one of the Australian Defence Force's principal training establishments
- \$700 million Singleton Bypass under construction on the New England Highway<sup>51</sup>
- Direct access to the Hunter Expressway, connecting to Newcastle and the M1 Motorway<sup>52</sup>
- Workforce capability in heavy mechanical services, fabrication, and materials handling.

# Upper Hunter Council

## Upper Hunter Council

Upper Hunter Shire is the furthest inland council area in the Hunter region and includes the main townships of Scone, Aberdeen, Merriwa, and Murrurundi. Scone Regional Airport supports charter, agricultural aviation, flight training, and corporate jet operations linked to the equine and mining industries.<sup>53</sup> The Upper Hunter is the single largest thoroughbred horse breeding area in Australia and is second only to Lexington, Kentucky, in the United States<sup>53</sup> There are more than 200 thoroughbred studs, as well as an equine-focused TAFE campus and the largest equine veterinary practice in the southern hemisphere.<sup>54</sup>

The Upper Hunter is home to 14,408 people, supports 5,703 jobs, and has an annual economic output of \$2.5 billion.<sup>55</sup> Agriculture, Forestry and Fishing is the dominant sector by both employment (1,304 jobs) and output (\$684 million), accounting for 27.4 per cent of total output. Manufacturing (\$390 million), Construction (\$297 million), and Rental, Hiring, and Real Estate Services (\$206 million) are the next largest sectors by output.<sup>55</sup>

While no active coal mines operate within the Upper Hunter Shire, mining in neighbouring Muswellbrook and Singleton shires has historically provided employment for Upper Hunter residents and supported the local economy. Within the vicinity of the Upper Hunter Shire, there are three renewables projects in the pipeline:

- Upper Hunter Energy Park (formerly Kyoto Energy Park), an approved 75.6 MW wind farm comprising 18 turbines, owned by Maven Renewable Energy, with construction expected to begin in 2026.<sup>56</sup>
- Goulburn River Solar Farm, a 585 MW solar and 560 MWh battery project near Merriwa<sup>57</sup>
- Lake Glenbawn, major water storage and proposed pumped hydro.

# Transferable Capability

Australia's energy transition will require a significant expansion of electricity transmission infrastructure. New lines, substations and network upgrades will be delivered at scale across NSW and nationally. As this investment accelerates, it creates an opportunity not only to build new infrastructure, but to broaden who delivers it.

This moment matters for the Hunter and Central Coast. The regions have a long industrial history, deep manufacturing skills, and established businesses among high-value sectors. This section examines how that capability could be applied to transmission manufacturing, and how the regions can capitalise on the economic transition.

The companies featured here may not yet supply transmission, but they are equipped to do so. These are businesses whose existing skills, assets and production environments align with those of transmission components. As demand grows, these companies could step into this supply chain. The profiles that follow provide a practical snapshot of where regional participation could expand over the near to medium term.

### Hunter and Central Coast manufacturing strengths

Transmission infrastructure covers a wide range of equipment, from large steel structures to specialised high-voltage systems. This work focuses on the parts of the supply chain that best align with the Hunter and Central Coast's established industrial strengths.

Across multiple sectors, the regions have demonstrated depth in:

- heavy steel fabrication and welding,
- precision CNC machining,
- industrial metal processing, and
- large mechanical assembly.

These strengths align most clearly with fabrication and machining-led transmission components. In these areas, value is created through material processing, precision, and quality control.

By focusing on these areas, we highlight realistic entry points where existing regional capability and future transmission demand overlap.

### Priority transmission manufacturing opportunities

Based on this alignment, four areas stand out as the strongest opportunities for increased local participation:

#### Transmission Towers (Steel)

Large lattice structures that support overhead transmission lines.

#### Transmission Line Hardware & Fittings (Steel)

Mechanical steel components that suspend, anchor and connect conductors and insulators.

#### Transmission Line Clamps & Connectors (Aluminium)

Precision aluminium components that grip, terminate and electrically connect conductors.

#### Substation Busbars (Fabricated Aluminium)

Rigid aluminium conductors used to distribute high current within substations.

These components represent the strongest intersection between what the Hunter and Central Coast already do well and what Australia's expanding transmission network will require at scale.

### Assessment of transferability

This section has been shaped through direct engagement with manufacturers across the Hunter and Central Coast, supported by regional supply-chain knowledge and desktop research.

The companies featured have engaged with the opportunity, demonstrated high suitability, and expressed strong interest. They reflect potential grounded in existing operations.

Alongside their relevant manufacturing capabilities, the profiles in this section highlight each company's likely path to entry. This is an indication of the scale of adjustment that may be required to capitalise on this opportunity.

#### Turning Investment into Growth

Australia's transmission expansion represents an opportunity to convert infrastructure investment into regional growth and long-lasting industrial capability. By focusing on transferable manufacturing capability, this section identifies realistic entry points for local industry.

Further work will still be required. Supply-chain understanding must deepen, business readiness must be supported, and procurement pathways can enable capable local firms to compete.

However, what follows is a showcase of real potential among the industrial capability in these regions. These companies appear ready to contribute to Australia's transmission future.
